1. Install **Docker** on your PC - https://www.docker.com/
2. Install **PostgreSql** in the **Docker**

```
docker pull postgres
docker run --name postgres -d -e POSTGRES_PASSWORD=myPassword-p 5432:5432 postgres
```

3. Update the Connection string in the project with the valid credentials

FilePocket.Host -> appsettings.Development.json

4. Open the Package Manager Console

and run the following command:

```
Update-Database -Project "FilePocket.DataAccess" -StartupProject "FilePocket.Host"
```

5. Go to **Solution Properties** and setup multiple startup projects

6. Start projects with **F5**
